Google Applications

Why are we using Google Apps?

To bring together essential communication applications. **To improve productivity and communication.** We can focus on student needs and adding value to the experience while Google focuses on building excellent products, maintaining the feature set, and innovating our communication options for tomorrow.

Our goal is to offer you a reliable, practical, secure, feature-rich webmail environment. We think Google can help.

We can focus on the core values of our school, such as student relationships, and let Google leverage its extensive operational experience with security and privacy.

Our IT staff can utilize an administrative set of APIs to build on top of Google Apps rather than starting from ground zero.

For instructions on how to access your Google Applications please click [Here](#).
