Networking

Both my roommate and I have computers. Can we both have our own network connections?

Yes, however each person has to establish personal accounts and provide machine registration information. These computers should be registered using their MAC addresses [Here](#). Please ensure that users register their own devices to their own account. If you are having issues locating your MAC Address please click [Here](#).

Further there should be multiple access points in each Dorm room on campus. Please make sure to check around the room, underneath the tables or behind the beds as they may be installed there. Connecting directly with an ethernet cable will allow you to access the campus network with the highest speeds.

If you are unable to establish a connection once plugged into the ethernet port in the wall, please contact the Technology Support Center at 321-674-7284 so that someone can be sent to test the port.
